Generative AI (GAI) has potential to completely revolutionize network data and OSINT analytics - potentially allowing investigators to effortlessly engage, analyze, visualize large datasets and “connect the dots” that would traditionally require enormous manual effort from teams of analysts and IT personnel. GAI is also one of those technologies that is particularly difficult to implement because of the inherent nature of machine learning systems and complexity of integrating GAI technology into operational environments. This session will cover the key operational issues related to GAI platforms.
